The daily COVID-19 bulletin of the Department of Health and Family Welfare, Government of Kerala summarizes the COVID-19 situation in Kerala. The bulletin also contains links to various important documents, guidelines, and websites for references.

### **Covid 19 status- Analytical Note**

- COVID infection prevention by following Covid appropriate behaviour got strengthened with introduction of COVID vaccination. Fast vaccination is very useful to safeguard people. COVID-19 vaccines protect people from getting infected and become severely ill, and significantly reduce the likelihood of hospitalization and death.
- 78% of the eligible population vaccinated with a single dose of vaccine (2,22,94,029) and 30% with a double dose (86,55,858) till September 10. Kerala is the state with highest rate of Vaccination/ Million- 869759. The state has vaccinated more than 93% of people aged more than 45 years with a single dose and 50% with double dose. The above data indicates that people have been cooperating. We appeal to the 2<sup>nd</sup> dose eligible people to take their second dose of Covishield/ Covaxin without delay. Both the vaccines are effective.
- During September 3-9, the average active cases were 242278, among which an average of around 2% only was admitted in oxygen beds and 1% were in ICU. During this period there was a reduction of around 20000 new cases. The growth rate in TPR and newly declared cases decreased by -8% and -10% respectively during the same week compared to the previous week.
- For any disease control program, active case finding is important. The state is doing appropriate testing. However, there is an apprehension regarding test positivity rate. It is hereby explained that test positivity rate indicates the infection. There are two specific issues all may understand i.e. contracting infection and because of contracting infection the disease is manifested. The World over post vaccination phase, this is examined as CONVERSION RATE to decide the severity of pandemic and is to be monitored.
- Out of total 2,37,643 cases of infection only 12.9% of the active cases are admitted either in hospital/Field hospitals. This percentage is more or less constant and that indicates that the progression toward disease of the person who is infected is not very alarming and appropriate care and support is being given to patients. The patients who arrive late in the hospital even though having morbidity are the majority patients in the hospitals and Diabetes and Hypertension together being the most common cause of patient death. Therefore, we request people with co morbidities once detected with covid infection to get hospitalized in time.
- The data as on date suggests the conversion rate is stable because the People are following instructions, taking vaccines. However, it can be further improved with one singular cooperation from all i.e. positive person having comorbidities should not delay the arrival in Hospital and take treatment as per the treatment protocols.
- Based on the Covid positive data during June, July and August, 6% of the Covid positive patients had taken a single dose of Covid 19 vaccination and 3.6% had taken two doses of covid 19 vaccination. This indicates that vaccinated people may get infected, even though it is very less. It indicates that post vaccination immunity is effective in preventing infection. However people and especially people with comorbidities should be careful. All must follow Covid appropriate behaviour. Vaccinated people, are advised to consult Doctor only when symptomatic. Non-Vaccinated people, if symptomatic, may do RTPCR test. Antigen testing is only for emergency purpose. Non vaccinated people with co-morbidities to do testing by RTPCR and consult doctor. Repeat RTPCR is not needed among the people who are detected COVID positive in the previous 2 months.
- All young person detected positive and at home isolation should do blood sugar test.
